POP-UP PORTABLE ENCLOSURE

The pop-up tent enables you to spray your clients in an environment that will help to prevent excess mist escaping in to the surrounding area, therefore keeping the area clean, as well as provide privacy for your client during the spray tan treatment.

During the treatment we recommend that you place a towel on the base of the tent for the client to stand on to prevent any possible slipping.

Always ensure that you wipe the inside of the tent with a damp cloth after each treatment to prevent tan solution build up.

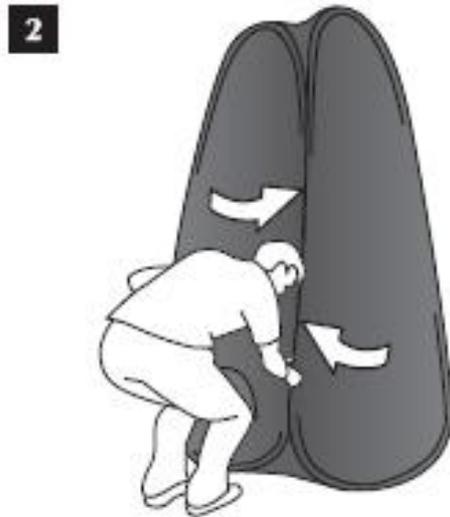

Place the Turbo Twister extraction unit at the rear of the tent. Roll the back flap of the tent up and secure in place. Position the Turbo twister through the hole provided and pull the draw string tight to close any gaps.

FOLDING INSTRUCTIONS

To fold your tent, please follow these step-by-step instructions. You may find it challenging for the first few times until you are well practiced.

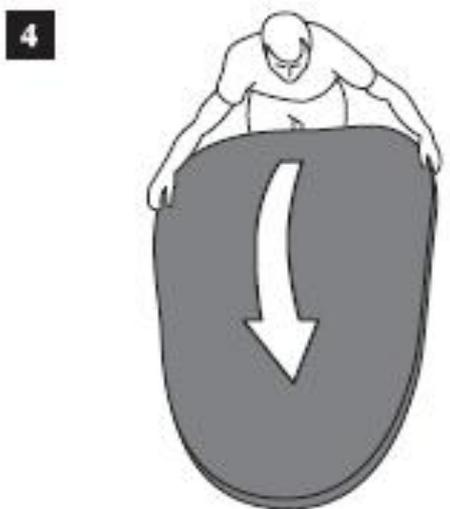

1. Collapse one of the backside corners in towards the opposite corner, leaving all zippers open to allow air to readily escape

2. Push the corner all the way in and down the length.

3. Fold in half, lightly shaking the tent so the rods fall flat and even.

4. Standing at the bottom of the tent, lay the top edge on the floor, away from you.

5

5. Fold in half, bottom end to top end, tucking in any excess from the sides.

6

6. Change hand positions so your thumbs are on the outside and fingers on the inside.

7

7. Rotate hands 90 degrees to the outside and the tent will naturally fall into 3 circles. Tuck the excess folds within the rings and place in the carry bag.
