SET UP GUIDE

Setting up your filter is easy:

1. Unpack System from packaging

2. Connect the power cord

3. Turn on just prior to the application

IMPORTANT NOTE: For best performance, position the unit in a vertical position directly behind where the spraying will occur.

HOW TO CHANGE FILTERS

The filters must be changed not washed. Filters need to be changed immediately when the spray solution starts to become visible on the backside of the filter. This is normal at between 80-120 sprays depending on use. Always keep spare filters handy (item number TE301019F).

1. Unscrew screws on both sides of the cover

2. Remove the cover

3. Detach and remove the old filter from inside the cover

4. Insert the new filter, re-position cover and tighten screws

SAFETY INFORMATION

The Tanning Essentials Turbo Twister Filter System is designed and built to the highest standards. However, this system must not be operated by children, only used by professional spray tan operators, kept away from water and must be connected to the correct power supply at all time.
